I'm building a cloud networking architecture

In this series I'm learning about AWS cloud networking. I'm learning about cloud networking because I want to add AWS networking experience to my resume - so many job descriptions ask for VPC knowledge.

Businesses traditionally had to physically build the network like provide the expensive hardwares, data centers, IT specialist, maintain the hardware etc. Cloud networking changed things. We still have physical setup but we don't own them - we use it
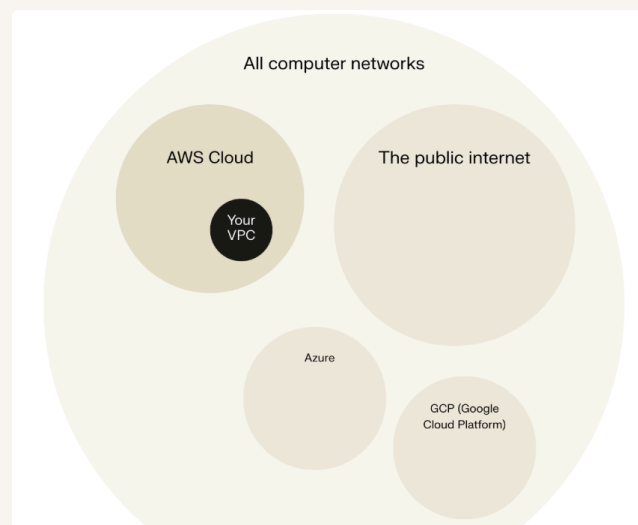

Excited to share my progress - build a VPC with me!

Cloud networking professionals are responsible for making sure a company's cloud networking setup is secure, efficient, and reliable. Their task includes : Network design, security, connectivity and monitoring.

What are networks?

Computer networks are group of computers that are connected together which helps them to communicate and share information with each other.

What is a VPC?

A VPC (Virtual Private Cloud) is like your own private section of the AWS network, where you control the flow of network traffic in and out of the AWS resources inside. Every AWS account comes with a default VPC, and you can create more.
